Tesla Conflict Minerals Report

(This report has been filed with the U.S. Securities and Exchange Commission to comply with the reporting period for the calendar year ended December 31, 2020.)

Tesla's Mission

The goal of Tesla is to accelerate the world's transition to sustainable energy.

Overview of Tesla

We design, develop, manufacture, sell, and lease high-performance fully electric vehicles and energy generation and storage systems, and offer services related to our sustainable energy products. We generally sell our products directly to customers, including through our website and retail locations. We also continue to grow our customer-facing infrastructure through a global network of vehicle service centers, Mobile Service technicians, body shops, Supercharger stations and Destination Chargers to accelerate the widespread adoption of our products. We emphasize performance, attractive styling and the safety of our users and workforce in the design and manufacture of our products and are continuing to develop full self-driving technology for improved safety. We also strive to lower the cost of ownership for our customers through continuous efforts to reduce manufacturing costs and by offering financial services tailored to our products. Our mission to accelerate the world's transition to sustainable energy, engineering expertise, vertically integrated business model and focus on user experience differentiate us from other companies.

Introduction

Tesla is committed to sourcing only responsibly produced materials. This means having safe and humane working conditions in our supply chain and ensuring that workers are treated with respect and dignity. In addition to the Tesla Supplier Code of Conduct ("Code"), we also have the Human Rights and Conflict Minerals Policy ("Policy") that outline our expectations to all suppliers and partners that work with us, as well as our commitment to conflict-free sourcing. We strictly follow all U.S. and foreign legal requirements and require companies in our supply chain to do the same. Our contracts with suppliers also require them to adhere to Tesla's expectations, including our Code, Policy, and environmental, health and safety requirements. Tesla also requires our suppliers to provide evidence to us of their operations that address these social, environmental, and sustainability issues as well as their sourcing in a responsible manner.

Tesla's supply chain has a unique hybrid of traditional automotive and high-tech industry suppliers from around the world. Many of our Tier 1 suppliers (i.e., direct suppliers) do not purchase their raw materials directly from mining/refining parties and instead obtain them

from their upstream suppliers and sub-suppliers. Therefore, reliably determining the origin of all of our suppliers' products is a difficult task, but the due diligence practices outlined below provide additional information and transparency that help us and our suppliers adhere to the responsible sourcing principles of our Code and Policy.

Our Tier 1 automobile parts suppliers are required to register and complete the domestic and international material compliance requirements in the automotive industry standard International Material Data System ("IMDS") in order to meet European Union and other international materials and environmental related regulations. This requirement is also mandated for all suppliers who supply their products or raw materials to us as part of our production-parts approval process.

Tesla's Responsible Supply Chain

All of Tesla's supply chain partners are subject to our Code. This Code is the foundation for ensuring social and environmental responsibility and ethical conduct throughout our supply chain, no matter the industry, region, or materials. Tesla continues to identify and do business with organizations that conduct their business with principles that are consistent with our Code.

Tesla, along with our partners and independent third parties, conduct audits to observe these principles in action. If there is a reasonable basis to believe a supplier partner is in violation of our Code, Tesla will transition away from that relationship unless the violation is cured in a satisfactory manner.

In addition, all our suppliers are subject to Tesla's Policy, which is publicly available on Tesla's legal page (www.tesla.com/about/legal).

Conflict Minerals Policy

Tesla is committed to sourcing responsibly and considers mining activities that fuel conflict as unacceptable. Pursuant to Tesla's Policy, our suppliers are expected to use reasonable efforts to ensure that parts and products supplied to Tesla are "DRC conflict free," meaning that such conflict minerals do not benefit armed groups in the Democratic Republic of the Congo ("DRC") or any adjoining country. "Conflict minerals" are defined as:

(i) columbite-tantalite (tantalum);
(ii) cassiterite (tin);
(iii) gold;
(iv) wolframite (tungsten); and
(v) any derivatives of the above.

These materials are considered "conflict free" if they are found not to be providing any benefit to armed groups within the DRC or its adjoining countries. Tesla requires our suppliers to establish policies, due diligence frameworks, and management systems consistent with the OECD Due Diligence Guidance for Responsible Supply Chains of Minerals from Conflict-

Affected and High-Risk Areas ("OECD Guidance"). Tesla expects its suppliers to stay up to date with and to use validated conflict-free smelters and refiners (SoRs) assessed by the Responsible Mineral Initiative ("RMI") and similar organizations.

Tesla recognizes the importance of mining responsibly and in a way that contributes to economic and social opportunity and development in the DRC region. Suppliers are allowed to source from the DRC or its adjoining countries, so long as it is from validated conflict-free sources such as SoRs recognized as conformant under the RMI's Responsible Minerals Assurance Program ("RMAP").

Human Rights Policy

Human trafficking, child labor, and slavery are crimes under state, federal, and international law. Unfortunately, these crimes continue to exist in regions throughout the world. Tesla is committed to ensuring that slave or child labor or human trafficking is not occurring within our supply chain. Tesla does not, and will not, tolerate the use of slave or child labor in the manufacturing of its products and does not, and will not, accept products or services from suppliers that engage in human trafficking in any form.

Supplier Compliance

In order to further ensure suppliers are in compliance with our expectations, our Code and Policy, as well as applicable legal requirements, Tesla is committed to:

- Continuously evaluating our supply chain to address any risks related to conflict minerals, human trafficking, slavery, and child labor;
- Reviewing suppliers' practices to ensure their compliance with Tesla's Policy;
- Requiring our Tier 1 suppliers to certify that their materials incorporated into Tesla products comply with the applicable laws related to conflict minerals, slavery, child labor, and human trafficking of the country or countries in which they are doing business;
- Disciplining contractors and appropriate parties who fail to meet the requirement of our Code and Policy, including potential termination of contract;
- Ensuring appropriate Tesla employees are aware of issues regarding conflict minerals, human trafficking, child labor and slavery, particularly with respect to mitigating risks within Tesla's supply chain;
- Investigating if Tesla has a reasonable basis to believe that a supplier may be engaging in human trafficking, slave or child labor, or use of conflict minerals; and
- Transitioning away from purchasing goods or services from any supplier that is believed to be engaging in human trafficking, slave or child labor, or use of conflict minerals if the supplier does not take corrective actions.

In-Scope Products

As a company at the intersection of technology, transportation (electric vehicles), and energy (solar and storage), products manufactured by Tesla may contain some portion of Gold, Tantalum, Tin, or Tungsten (commonly referred to as "3TG") or a combination of these.

Automotive Suppliers

We use the IMDS to help determine which automotive suppliers to include in our conflict minerals due diligence inquiries. Utilizing the IMDS database, we review our entire Tier 1 supplier base to determine which suppliers are likely to supply products with 3TG. To best address the use of conflict minerals within our supply chain, we engage with suppliers who have a likelihood of using the covered materials in the products supplied to us in our Reasonable Country of Origin Inquiry ("RCOI"). For any automotive suppliers that provided a response in contradiction to their IMDS submission, Tesla requested that the supplier provide an update either to the IMDS or Conflict Minerals Reporting Template ("CMRT").

Non-Automotive Suppliers

In an effort to include all possible sources of 3TG in our supply chains, Tesla also requests Tier 1 suppliers in our solar and energy supply chains to complete CMRTs and includes them in the RCOI with our automotive suppliers.

Reasonable Country of Origin Inquiry

Due to Tesla's downstream position in our supply chain, any efforts to understand the origin of raw materials rely on the cooperation of our Tier 1 and other upstream suppliers. In total, nearly 600 Tier 1 suppliers took part in our RCOI process, including automotive, solar, and energy suppliers. Participation in our process increased from last year due to Tesla's opening of our Gigafactory Shanghai facility and expansion of our local supply base in China. Where possible, Tesla tries to localize our supply chains. Therefore, for any new Tesla facilities coming online in the future, there may be new suppliers joining our supply chain. Tesla will continue its efforts to inform suppliers on our requirements, Code, Policy and the need to conduct diligence and share information on the sourcing of 3TG within their supply chain when they are unfamiliar with the issue.

Our goal continues to be achieving a 100% response rate, and we reach out by e-mail and phone to our Tier 1 suppliers multiple times throughout the year. In total, we received responses from over 520 of these suppliers, for a response rate over 80%, which is an improvement over the previous reporting year both in the number of responses and the percent responding. Over the past year, Tesla has continued to add new products and contract with new suppliers as the company continues to grow, offer new products, and expand to new regions around the world. Our collection efforts captured all business-significant suppliers and included information from more than 83% of our covered parts spend in 2020.

For the 2020 reporting year, we utilized the RMI's CMRT to gather information from our Tier 1 suppliers. In order to gain greater transparency into all potential SoR and conflict minerals risks, we request suppliers to provide responses based on all of their operations at their company level rather than just providing information about their supply chain specifically related to the product(s) that Tesla purchases.

In addition, Tesla engaged a reputable third-party service provider with experience in conflict minerals data collection to assist with the engagement and training of suppliers, collection of CMRTs, validation of responses, SoR identification, initial risk assessment, and conflict minerals report review.

Industry Collaboration

We recognize the importance of working with industry peers and organizations and believe that a consolidated effort is the most efficient method to determine the reasonable country of origin. Through our continued involvement in the RMI, we contribute information to help identify the current status of many of the smelters in our supply chain. To help determine the reasonable country of origin for the 3TG in our supply chain, we continue to monitor and rely upon the RMI's progress in identifying and validating smelters and refiners.

The information in Annex I is based on RMI's RCOI data as of March 26, 2021 and Tesla's 2020 supplier CMRT responses received. Based on this information, the countries of origin of the 3TG contained in our products may include the countries listed below in Annex I. For example, this information may be underinclusive to the extent any of our suppliers have not provided complete information regarding the countries of origin in their or their sub-suppliers' supply chains. At the same time, this list may be overinclusive due to the RMI's database including countries from the supply chains of all of its participants and not just Tesla, and we have noted where there has been no evidence from the CMRTs collected that a country on the list is part of our supply chain. Annex II lists the conformant smelters and refiners that may be in Tesla's or our suppliers' supply chains with respect to 3TG contained in our products, and this information is based on the 2020 supplier CMRT responses received and data from the RMI regarding conformant SoRs.

Description of Due Diligence

Our conflict minerals process and policies are designed to conform in all material respects with the OECD Guidance.

Step 1: Establish Strong Company Management Systems

As noted above, Tesla has a Human Rights and Conflict Minerals Policy, as well as its Supplier Code of Conduct. These policies are publicly available through our website (www.tesla.com/about/legal). Our supplier manuals also address our policies on conflict minerals and state our expectation that all Tesla suppliers are accountable for performing due diligence on their mineral supply chains in accordance with the OECD Guidance. Our

contractual terms with suppliers (i.e., General Terms and Conditions) also include our expectation that all Tesla suppliers are accountable for performing conflict minerals due diligence aligned with the OECD Guidance as required by Section 1502 of the Dodd-Frank Wall Street Reform and Consumer Protection Act.

Tesla maintains a specialized team within the company's supply chain organization to lead these due diligence efforts, including implementing the additional use of the CMRT to further query at-risk Tier 1 suppliers. In addition, an internal cross-functional Tesla Responsible Sourcing Steering Committee (the "Steering Committee") composed of Tesla management from Supply Chain, Internal Audit, Environmental, Health and Safety, Policy, ESG, Compliance and Legal oversees these due diligence efforts and potential risks and issues within our supply base. Our efforts have been approved, and the letter of authorization sent to suppliers signed, by a Vice President of Tesla's Global Supply Management.

Step 2: Identify and Assess Risk in the Supply Chain

Tesla's risk identification and assessment process begins with the RCOI process detailed above and by leveraging the CMRT. In-scope Tier 1 suppliers are engaged multiple times during this process, and internal stakeholders, such as global supply managers, are also engaged to emphasize to our suppliers the importance of their participation. Supplier data is collected over a ten-week period in order to allow for follow-up and further validation.

Supplier responses are continually reviewed throughout the process to ensure consistency with expected responses, and suppliers are asked to provide evidence of their own due diligence processes. Utilizing a reputable third party, we also assess each CMRT received and follow up with suppliers who provided incomplete or invalid responses. When a supplier discloses that it has non-conformant SoRs in its supply chain, Tesla may, based on the relationship with the supplier, inform the supplier of our expectation to source only from suppliers that have been certified as conflict-free by a globally recognized protocol and the supplier is provided an opportunity to cure.

SoR information is assessed against information provided by the RMI for validity as a SoR. Valid SoRs are then reviewed for their status as "conformant to" or "active in" a conflict-free audit program. Tesla also leverages the RMI's Risk Readiness Assessment tool to better understand where SoR risk may emerge in our supply chain.

Tesla carefully monitors responses from suppliers on their own internal policies and processes regarding conflict minerals. If a supplier's policy does not meet our expectations, we not only emphasize the importance of these practices, but also work with that supplier to ensure that its policies are updated to properly address the appropriate process within their supply chain.

Step 3: Design and Implement a Strategy to Respond to Identified Risks

We also monitor SoR validation progress by the RMI or other cross-recognized SoR audit programs. Any concerns with supplier responses throughout the data collection process are brought to the attention of the Steering Committee for further review and action.

In alignment with the OECD Guidance, Tesla shares the names of SoRs provided to us that have not been validated to the RMI for validation and audit.

With recognition of the importance of cross-industry collaboration and to share best practices, Tesla continues to participate in the RMI and the Silicon Valley Conflict Minerals and Human Rights Forum.

Step 4: Perform Independent Third-Party Audit of Supply Chain Due Diligence

As outlined in the OECD Guidance, we support the RMI, an industry initiative which audits due diligence activities of SoRs and refiners. We support the RMI's outreach efforts and RMAP SoR audits through our membership in these programs. We reserve the right to ask any high-risk Tier 1 supplier to audit their supply chain conflict minerals due diligence program using a third-party independent auditor.

The data on which we rely for certain statements in this declaration are obtained through our membership in the RMI using the RCOI report for member TSLA.

Step 5: Report on Supply Chain Due Diligence

We report on our due diligence efforts as required by law and to comply with Rule 13p-1 under the Securities Exchange Act of 1934, as amended. This report is also available on Tesla's publicly available Legal page (www.tesla.com/about/legal).

Continuous Improvement

Tesla is always working to continually improve and our goal remains to source all of our 3TG through conflict-free and conformant SoRs and refiners. In an effort to further strengthen our efforts, we also:

- Continue to participate in cross-industry groups such as the RMI and Silicon Valley Conflict Minerals and Human Rights Forum;
- Continue to work with in-scope suppliers to improve response rates to our audits, improve the quality of their responses and ensure their sourcing from conformant SoRs and refiners;
- Continue to include participation in our RCOI process as a contractual requirement for our suppliers;
- Encourage suppliers to conduct responsible sourcing from the DRC and its adjoining countries by using conformant SoRs, and discourage the creation of a de facto embargo on sourcing from the region;
- Through participation in RMI's Smelter Engagement Team, encourage SoRs to participate in RMAP protocol and discourage a potential embargo of the DRC region;
- Educate suppliers on the importance of understanding the 3TG content of their products and maintaining consistency between their CMRT responses and IMDS submissions; and

Results of Reasonable Country of Origin Inquiry & Due Diligence

Annex I

Due to Tesla's downstream position in our supply chain, any efforts to understand the origin of raw materials rely heavily on the cooperation of our Tier 1 and upstream suppliers. We have uncovered no evidence to date that our suppliers' sourcing of 3TG materials has contributed to conflict or human rights violations. Based on our due diligence efforts to date, we believe that the following list of Countries of Origin reflects countries from which our suppliers may have sourced from conformant SoRs and refiners. This information may be underinclusive to the extent any of our suppliers have not provided complete information regarding the countries of origin in their or their sub-suppliers' supply chains. At the same time, this list may be overinclusive due to the RMI's database including countries from the supply chains of all of its participants and not just Tesla, and we have noted where there has been no evidence from the CMRTs collected that a country on the list is part of our supply chain. Tesla will continue to work with our suppliers to source only from such compliant smelters and refiners, including by encouraging suppliers to have their non-participating SoRs successfully complete an audit program.

Through its membership and participation in the RMI, Tesla is provided information on the country of origin of conformant SoRs within our supply chain. All materials sourced through conformant smelters and refiners are considered "Conflict Free". Over the past two years, the information provided by the RMI on countries of origin has expanded greatly beyond the previously provided data on Level 1, 2, and 3 sourcing to include aggregated sourcing data from all of its contributors through cross-recognized conflict-free protocols. The RMI's RCOI data does not specify the countries of origin of the conflict minerals processed by the compliant smelters and refineries listed below in Annex II. In addition, it is not always possible to know the countries of origin of the 3TG contained in scrap and recycled sources. Tesla continues to work to gain further insight and transparency into our and our suppliers' supply chains for 3TG, including fully identifying countries of origin of 3TG and the smelters and refiners used to process the necessary conflict minerals in Tesla's products.

Tesla has chosen to disclose all countries provided in the RMI's newly expanded database, which includes information from all of its participants' supply chains and not just Tesla. In addition, the majority of our suppliers provided information on the SoRs used in their entire operations at the company level, and not just for their products specifically purchased by Tesla. It is important to note that we do not have direct relationships with suppliers or sub-suppliers in many of these countries and have no direct influence on the supply chain when it is so many tiers removed. Therefore, although a country may be listed in the tables below, it does not necessarily indicate that Tesla or one of our suppliers is sourcing from that country. In addition to the expanded RMI database findings described above, Tesla greatly increased the number of suppliers in our supply chain due to our higher manufacturing volumes, new manufacturing facilities and the introduction of a new vehicle model to our product lineup. As our processes continue to improve and the specificity of the information provided by the RMI database increases, this list may fluctuate year over year.

Countries listed in bold are considered "covered countries" (i.e., the DRC and its adjoining countries) under U.S. conflict minerals disclosure rules.

*** Tesla does not directly source from these countries and has no relationship with any companies or individuals located within their national boundaries. Tesla continues to utilize the list of potential countries of origin as provided by the RMI, whose database greatly expanded in the past two years and which includes all potential countries of origin from the supply chains of all of RMI's member participants and not just Tesla. Information provided to us by the RMI is aggregated for all conformant SoRs in its database and does not necessarily imply use by Tesla of materials sourced from these countries or SoRs. In addition, the majority of our suppliers provided information on the SoRs used in their entire operations at the company level, and not just for products specifically purchased by Tesla. The U.S. Department of Treasury's Office of Foreign Assets Control removed comprehensive U.S. Economic Sanctions against Sudan in August 2020, however information provided by our suppliers is inclusive of all of 2020.*

Annex II

SoRs Identified

Tesla suppliers identified more than 700 unique SoRs based on RMI CID across all CMRT responses received. As part of our due diligence process, we identified 340, or 47%, as valid SoRs and 278, or 82%, as engaged with RMI or conformant. Identification was performed by both Tesla's engaged third-party service provider as well as an internal review of SoR names as compared to the RMI's SoR database. RMI's ability to perform both new and renewal audits was greatly affected by the global COVID-19 pandemic, and we expect additional SoRs to become conformant to a conflict-free protocol in the coming years as audits are able to return to pre-pandemic levels or better. As we continue to engage with SoRs directly and through

stakeholder initiatives, such as the RMI's RMAP, we hope to see these SoR conformance rates continue to increase.

SoR Summary

The following list of facilities are smelters or refiners believed to be in Tesla's supply chain who have completed the RMAP audit program and are listed as conformant for responsible sourcing practices. We publish this list to hold these smelters and refiners accountable and to give credit for their continued participation in the RMAP. In addition, we hope that this encourages the remaining smelters and refiners in our supply chain to accelerate their efforts to demonstrate responsible mineral procurement through the RMAP.

[+] *The U.S. Department of Treasury's Office of Foreign Assets Control (OFAC) removed comprehensive U.S. economic sanctions against Sudan in August 2020. Nonetheless, the following smelter, located in Sudan, is monitored under the current Conflict Minerals initiatives: CID002567 - Sudan Gold Refinery, and was identified as part of the 2020 report. Tesla does not directly purchase any gold and we do not deal directly with any smelters or refiners. We engage with our direct suppliers and ask them to provide us their conflict minerals reporting template, which we combine to produce our own report. Tesla is not aware of any sourcing of gold by its direct suppliers from this refiner.*

[++] *The U.S. Department of Treasury's Office of Foreign Assets Control (OFAC) imposed U.S. economic sanctions against a major shareholder of the entity known as Renova Group. Based on publicly available information, Renova Group appears to be the owner of the following smelter that is monitored under the current Conflict Minerals initiatives: CID000927 - JSC Ekaterinburg Non-Ferrous Metal Processing Plant. Tesla does not directly purchase any gold and we do not deal directly with any smelters or refiners. We engage with our direct suppliers and ask them to provide us their conflict minerals reporting template, which we combine to produce our own report. Nonetheless, we have worked to identify the suppliers who utilize this smelter within our supply chain. We have asked this smelter to be removed from their supply chains.*
